Siemens.nx.10.0.3.5.update.win64.ssq

Download

siemens.nx.10.0.3.5.update.win64.ssq. exe: Error: cannot open or get a valid name of module How do you suggest I change this line? I know it can't be a permissions issue because I can run it in an elevated and admin window without changing anything in my profile. I just can't figure out how to fix it. This happens on Windows 7 on a 64 bit machine. This happens with any DLL file and on any system if I run it in an elevated and admin window.
