The first commercial AutoCAD was called CADRUN; it was intended to be run on RISC and Motorola 68000-based microcomputers. CADRUN competed with the first 32-bit AutoCAD, which was originally called EXEUP. Before developing EXEUP, Autodesk had built a 64-bit operating system for a 68000-based microcomputer called VIASPEC, with a file manager, file system, and text editors. VIASPEC was soon replaced by EXEUP, which was based on the Motorola 68000 but with a new operating system that was being developed with the use of a special operating system known as COPY. EXEUP became the first 32-bit version of AutoCAD. EXEUP was intended to run only on 68000-based microcomputers. The first such microcomputers were the Apple Macintosh with an Apple IIe graphics adapter, and the IBM PC with an Enhanced Graphics Adapter (EGA) and a Color Graphics Adapter (CGA). The first released version of AutoCAD was called CADRUN, a vector graphics application developed for RISC and Motorola 68000-based microcomputers. CADRUN was a standalone graphics package for the 68000. Its key innovation was its unique file system which was implemented as a tree of files and directories. CADRUN was advertised to be the first fully featured commercial CAD software for microcomputers. CADRUN was released in 1982, along with the first commercial workstation-based version of AutoCAD, EXEUP, and the first 32-bit operating system for microcomputers, EXEUP. EXEUP was also the first version of AutoCAD that supported both disk-based (faster) and ROM-based (slower) internal storage devices, using both hard disk drives and ROM drives. The second released version of AutoCAD was called DesignWorks. The first released version of DesignWorks was called VectorWorks, released on May 10, 1983, and it was based on CADRUN. VectorWorks was originally developed on the COMPUDISK 68000-based personal workstation. VectorWorks ran on the Xerox Alto, a personal computer that had a color monitor, a keyboard and mouse, and a keyboard-like graphics tablet. VectorWorks was the first commercially released personal CAD package for microcomputers, and the first commercial CAD software to run on a single display (rear-projection CR

### AutoCAD Crack

The Windows Platform includes a VBA-like programming language called Visual Basic for Applications (VBA). In the October 2008 update to AutoCAD LT, a new version, AutoCAD LT 2010 was released, which included a .NET-based automation framework called ObjectARX. ObjectARX provides an API for programming AutoCAD in Microsoft's .NET framework. Visual LISP was still available as a separate development tool. XML-based technologies are also supported with the .NET platform. ObjectARX supports XML in its source file format, and can be used to communicate with the source object of the drawing. An ObjectARX plug-in was developed to read and write XML with respect to a source object. ObjectARX can be extended to read and write AutoLISP. ObjectARX can also communicate with AutoCAD, using Autodesk's ABAP programming language. There are other AutoCAD-related technologies, such as Assembler, which is a run-time tool that extends AutoCAD with a number of special tools. For example, Assembler can assemble parts of AutoCAD drawings (including models, schedules, drawings, and sequences). This can be useful for creating large assemblies for assembly drawings. AutoLISP

AutoLISP was a programming language for AutoCAD. It is a special form of LISP called AutoLISP. AutoLISP, by contrast to Visual LISP, is an interpreted language. This means that it takes more time to run than a compiler language such as C or C++, because AutoLISP code is interpreted by the computer at run time. However, AutoLISP is "interpreted" in a sense that any of the code in AutoLISP can be an object in a program in AutoLISP. In the case of AutoLISP, some or all of the objects that make up the AutoCAD drawing can be written in AutoLISP. AutoLISP objects can be exported in the DXF drawing file format, and can be used in AutoCAD by importing the DXF file. In the past, AutoLISP objects could also be compiled into Visual Basic for Applications (VBA) code. In the current version of AutoCAD, VBA is a separate tool from AutoLISP. VBA is a type of programming language, used a1d647c40b
