The Draw/Draft Module, as it is known, is the core of the Autodesk AutoCAD software package. It contains a set of tools for creating and manipulating drawings. It supports different drawing tools, including polylines, arcs, circles, ellipses, rectangles, text, and more. The user can also draw freehand. Other tools in the Draw/Draft Module include the pencil tool and a hook tool, which is used to create holes in two-dimensional objects, and the text tool, which allows the user to insert text in a drawing. The same functions are available in a later module called the Browsing Module, which adds additional options for browsing and searching for objects within a drawing. Browsing also allows the user to add references to objects, or links to objects that are embedded in other drawings. Embedded objects include PDF files, DWG files, DXF files, and other file formats. The user can choose to embed these files in the drawing. The drawing can be saved as a set of links to other objects, so if the object that is linked to the drawing is changed, the user can easily update the drawing. The Draw/Draft Module also contains the DIMensioning Module. This module is an extension of the Drawing/Browsing Module and provides the ability to change the size of objects in the drawing, making it possible to view large drawings on mobile devices. Dimensions are calculated automatically, so there is no need to manually enter object measurements or dimensions. Autodesk AutoCAD is used to create many of the drawings in the engineering, construction, and architectural fields. Architectural drawings are typically complex documents containing sections and elevation drawings of a building. Although AutoCAD can generate several different views of a drawing, drawings are usually viewed at the “isometric” (or orthogonal) scale, a perspective view showing a three-dimensional object from a single angle. AutoCAD user manuals are not usually available, but the user manual can be accessed by going to Help\User Guide\User Manual. As of July 2019, the latest release of Autodesk AutoCAD is version 2020. An update is

available as well. AutoCAD Basics AutoCAD was originally available as a desktop CAD application. It was first released in 1982 and was the first cross-platform desktop CAD program available for PCs, Macs, and microcomputers with internal graphics controllers.

Programming An API is provided for use with the Visual LISP programming language to create plugins and add-on applications. This API allows the use of the Autodesk Exchange Apps. AutoCAD's DXF (drawing exchange format) allows importing and exporting drawing information. AutoCAD supports a number of languages which can be used for coding with the software. A number of proprietary programming languages are available to develop extensions. AutoCAD's native language is AutoLISP and it has Visual LISP as an extension. AutoLISP has the ability to read/write many file formats. Autodesk Exchange Apps can be written in Visual LISP. Visual LISP is a programming language that is a further development from AutoLISP. Visual LISP has the ability to read/write many file formats. ObjectARX is a C++ class library for AutoCAD. It is the base of ObjectARX for AutoCAD, Autodesk Exchange Apps and other applications. There are various programming APIs including: Visual Studio.NET. Visual Basic for Applications. C/C++. AutoLISP. Visual LISP. There are several proprietary languages that can be used for programming extensions: AutoCAD. AutoCAD Architecture. AutoCAD Electrical. AutoCAD Civil 3D. AutoCAD Electrical 3D. These languages allow programming extensions for AutoCAD to create add-on applications, custom parts, plug-ins and functions. Database The database interfaces of AutoCAD are primarily based on the InterSystems Caché database. For over a decade, InterSystems has been Autodesk's primary database partner. AutoCAD's database architecture is based on PostgreSQL. It has additional internal database applications called QCADDB, that are not based on the PostgreSQL database. The incident unfolded this month when an employee of the Department of Corrections visited the home of Benjy Fountain, KCCB News reported. The employee told authorities that he'd found two 8-gauge, double-barrel shotguns in Fountain's home and garage. The man also found marijuana plants growing in the garage, as well as in Fountain's greenhouse. Benjy Fountain / Facebook The employee reportedly told the Department of Corrections that Fountain was "preaching the gospel" and "preaching about growing marijuana." Fountain was subsequently charged with felony marijuana cultivation and possession of a firearm by a felon. He had previously been convicted of a felony drug charge in 2007 and sentenced to 10 years' probation. He also had a history of previous drug possession charges, according to the Charlotte Observer. Fountain told the Observer that he grew the plants to feed his family and keep them safe from drug dealers. He said he had a permit to grow a small number of
