One can install the audio player onto their computer, either by downloading and installing the application or by opening the ZIP file. A second method of installing the application is through the Synology Manager and installing it that way. The audio player is a basic audio player and does not have any other features. The audio player does have a few important things though, one can view and modify the audio player in the DJ mode or turn it into a simple audio player. The audio player can be modified from the DJ mode. One way to do this is to use the context menu of the audio player to create a playlist of the songs that are currently playing. From the playlist, one can select the songs that they want to play. Another way to modify the audio player is to use the option to edit the audio player. This allows one to add other songs to the playlist and have them automatically played. One can also view all the songs that are in the audio player. The only other way to get the audio player to play a song is to use the play command that is in the top left corner of the audio player. If one is tired of the music that is playing or needs to change the audio player to a basic one, one can turn the audio player into a basic audio player by simply clicking on the DJ mode. The DJ mode is also where one can add music to the playlist, edit the playlist or turn it off. Overall, DJ Player is a good audio player with many features. The app was developed by RomSoft.
