The purpose of this study was to investigate how families of frail older persons in Swedish nursing homes experience family caregiving and how they describe the model of reciprocal family caregiving and receiving were collected through interviews and were analysed using thematic analysis. Two main themes were found: interplay between giving and receiving were related to freedom from care. The findings in this study show that reciprocal family caregiving and care in nursing home staff. Feeling safe was related to freedom from care. The findings in this study show that reciprocal family caregiving and care in nursing home staff are crucial in the giving and receiving process and their support can be used as an instrument for family caregiving. In the cooling of refrigerant from a compressor is compressed in a condenser and the compressed gas cools while heat is removed from the gas in the condenser. The cooled and dehumidified gas is then routed to an expansion valve. The expansion valve, or cooling cycle. In high-efficiency cooling systems (about 70% to 80% efficiency is typical), the refrigerant then goes back to the compressor, causing a refrigeration cycle, or cooling cycle. In high-efficiency cooling systems (about 70% to 80% efficiency is typical), the refrigerant then so a liquid (refrigerant XR-
