Brushes The \_brushes\_ in Photoshop are controls for the application of color to the images. Brushes are made up of individual pixels, and it's possible to change them in various ways using brush presets, which are the default settings. You can use these brush settings or create your own by modifying the default settings. The brushes are also color-based; for example, you can use the same brush to apply pink. When selecting brushes, be sure to select the Type layer for best results. In addition to setting the size, shape, and opacity of a brush, you can also adjust the following two settings: \* \*\*Contrast:\*\* Controls the overall intensity of color used for the brush strokes. \* \*\*Blur:\*\* Controls the degree to which the strokes on the brush are blurred. The blur effect adds a soft look to your images.

**Q:** SQL Server 2008 - Does any one know if it has INNODB + MyISAM compatibility? I have a software which creates Views from a MyISAM table. I wanted to add support for SQL Server so the views would become SQL Server views. I read on the web that INNODB has this compatibility. Any one knows if it also supports MyISAM tables? I am currently using MySQL 5.1.43 and I do not want to upgrade to 5.6 because of the license fees. **A:** According to the documentation at MySQL Compatibility Matrix: MyISAM MyISAM is fully supported for new installations using MySQL 5.1 or newer. It states that support for up-to-date MySQL versions is guaranteed by Red Hat, but actually there is an additional compatibility statement for MyISAM: MyISAM with MySQL 5.1 or newer provides full compatibility and support for new MySQL 5.1 features and later enhancements. I would guess that support for MyISAM in 5.1 or newer also includes compatibility for version 5.6, but have not been able to find any information about this. **Q:** Add a window with a parent to the current VS Code's window This question aims to add a window with a parent to the current VS Code's window. **Edit:** Actually, it's a child window. In this case, I don't care if it is a child window or not. I just want to add an existing window to the current window's parent. I tried something like this but it didn't work. Are there some commands to do this? **A:** Sorry for the late answer. There is a command to do this. For your reference, I post below a command reference: Open Parent Window of Current Window As an example, the following command, will open the current window's parent window: vs:open-parent-window (You can type vs: followed by the Open parent window command name. The command can be preceded by the --help flag to display the list of commands.) Additional info: It's worth noticing that this command opens a window in the same workspace as the current one. **A:** It seems that what you are looking for is a command like this: :vs.ui.window
