die proteus model library beinhaltet eine reihe von ressourcen, um eine mehrsprachige tastatur, ein eingerichtetes calendar und mehrere amazon device farm-arbeitsprojekte zu schreiben, die jede bezeichnung verwenden. sie können auch für einzelne device farm-arbeitsprojekte verwenden. the model gy 521 is compatible with the model gy 521s, but it will require a significant firmware upgrade to be fully functional. this will be performed as part of the upgrade to the model gy 521s. it is not possible to upgrade model gy 521 to model gy 521s without first upgrading to model gy 521s. the model gy 521s is a completely new gyroscope. it uses a piezoelectric element to drive a closed loop gyroscope. it requires 2 x 20 ma to power the gyroscope. the gyroscope has the same sensor as the model gy 521, but it requires a different calibration method. the gyroscope also has increased noise immunity, and better analog filtering. the gyroscope also has a new design which eliminates certain resonant modes of operation, which decreases noise. the model gy 521s is capable of being powered by a single power supply, which is important in applications such as micro-servo controllers, where a single power supply is used to supply power to the controller and a gyroscope. the model gy 317/318/319 use a piezoelectric gyroscope which requires 2 x 0.5 ma to power the gyroscope. the gyroscope has the same sensor as the model gy 521, but it requires a different calibration method. the gyroscope also has increased noise immunity, and better analog filtering. the model gy 320/321/322 use a piezoelectric gyroscope which requires 2 x 0.5 ma to power the gyroscope. the gyroscope has the same sensor as the model gy 521, but it requires a different calibration method. the gyroscope also has increased noise immunity, and better analog filtering.
