It has been recently demonstrated that superoxide anions play an important role in the activation of monocytes by endotoxin. The aim of this study was to elucidate the effect of two specific inhibitors of NADPH oxidase on the release of interleukin-6 by bovine peritoneal neutrophils. The effect of the NOX2 inhibitor AEBSF and the NOX1 inhibitor GKT137831, on the release of interleukin-6 was examined by using whole-cell voltage clamp technique. It was shown that both NOX1 and NOX2 inhibitors decreased significantly (p < 0.05). Can I use this piece of code to identify whether the browser is in IE10 or IE11?
