Avid has done a good job taking the types of edits that Photoshop can't do and building a video product around it. However, Photoshop is not built to output video, and for someone that does a lot of video work regularly or wants to dive very deep into that world, Avid is still the only choice. Adobe does offer a limited ability to export to Avid Media Composer and the Adobe Creative Cloud Libraries, but really, Avid is the only choice. All of Adobe's Photoshoppers are powerful, but Dreamweaver is the best and the most flexible. The program is deceptively simple. It was initially bundled when you bought a Mac and it also can run on Windows, but Dreamweaver has all the things you need to design and create an e-commerce site, a multipage brochure, a fabulous greeting card, a zany online game, a cool blog, a killer resume, and a t-shirt Web site. The new iPad is an iMac with a touchscreen, which makes this program an even better choice on the go. You can sync your files from Adobe either manually or from the cloud, cover the entire screen, have up to six monitors, and drag and drop files and folders into it. The great thing about Photoshop online is that you can copy and paste images from the browser. If you want, you can also drag the size box on an image to set the desired sized. iLounge also notes that you can actually "drug and drop" a file off of Google Drive or Dropbox, as well. The program is one of the major options for designers world over. Not only this, but it remains one of the most powerful image editors and one of the most popular too. It can combine photos and combine them with other images done in Photoshop, Powerpoint, and Illustrator as well. Adobe Photoshop's text tools are super useful for different studies. The freehand selection handles the entire text line to be selected even with the space and the text is perfectly rotated around its text layer. Photoshop is the best software where you can do an overall review of the image's color, saturation, and white. With this tool, the user can alter only the lights as well as the shadows and does not affect the rest of the image, such as the midtones.
