A hands-on review of Adobe Photoshop Elements 2020 reveals a powerful image-editing program at a very affordable price. Though it is designed to be a simple platform for hobbyists, "memory keepers" and digital scrapbookers who enjoy creating photo and video keepsakes of life events for family and friends, it's relevant, in my opinion, for anyone with a camera. Since, I'm a beginner with this software so far I have no idea how to even begin. I am mainly trying to do some type of drawing / sketching, which I am not that familiar with. I would like to start with the simplest features first, and build my way up from there, but I am unsure how to do that. How to Use It: While it's possible to create a linear gradient, it's easier if you create a radial gradient. Radial gradients create a wide effect of a gradient that remains inside the circular shape. You can isolate the gradient start/stop points away from each other, which will create a larger gradient. You can also add points for radiating colors or pastel colors. Of course, you can use the gradient tool to create any type of shading and color changes. Gradients are determined by how much control you have over the gradient start and stop points. Easy gradients often have many points, creating a jagged effect. **Your Style:** A common problem is that you apply a gradient pattern on a background and color, and you end up with weird color issues. For example, you can apply a gradient over a person's face with a soft blue that makes her face appear transparent. But if you then use someone else's eyes to apply a background, the eyes may be created with a blue gradient that's not connected to the left eye. The result is that it looks like the person's eyes are floating in space and are attached to nothing. **How to Adjust the Gradient Start and Stop Points:**Once you have created a gradient, you can play with the gradient start and stop points. Let's say you draw a gradient in the shape of a heart. You can then add the color gradient to other colors. Then you can move the points around to wherever you want and adjust them to any color at the same time. e3d0a04c9c
