After using Adobe Photoshop CC on the iPad Pro, I have to say I prefer working on it. It really is a lot better on the Apple Pencil. I generally want my work space to be as close to the infinite canvas and not limited to a window on my Mac. It's cool to be able to work in a more vertical (vertical might be a better word for horizontal) fashion. With this iPad edition, I can easily imagine myself using this kind of tool in the future. As a freelance photographer, I could really make full use of this on-the-go photo editor for clients' portfolios, for quick photo retouching, or to do some basic post-processing, for example changing the white balance of a photo. And, I don't think learning Photoshop will be a major challenge the way it is on the desktop. It's simple enough that anyone new to Photoshop could open up the iPad Pro, open up Photoshop Sketch, and know exactly what to do—and that's a challenge. Just don't forget to turn off Airplane Mode when you're done! I love the thought of using Photoshop Sketch. And, It's a great editor for images. When it comes to a specific project, it is true that it's missing a few basic editing features, like layers, but it's a work in progress, I think. You can import PSD's right from Sketch nowadays, so the lack of layers (or not the exact same effect) is going to be a barrier soon enough. As a mobile tool, this is perfect—the big idea of Sketch is to let you try out Photoshop on the go in a lightweight way. I think it's a great tool to use for quick photo editing on the iPad. It's all about workflow, and Sketch is just as suited for that as working on a Mac. If you try it out, you'll love the experience.
