It might be some time before the average Joe or Jane can become a Photoshop expert and as a result, the app is right there to help them get started. You can do it all from the app: add a brand to the logo, design an appealing banner, feed some aged photos the AI treatment, or cancel out a gray-scale and add a bit more life. If a grad student could create more engaging work, this is what they would be using to do it. Adobe has introduced a new iPhone app, called **Adobe Stock**, that provides access to a library of high-quality stock libraries. That includes the ability to drag and drop images directly into a Photoshop file and have them appear as a background. From there, you can create a "texture" that will project into the background in any composition that supports the texture viewlet. The app is free, but the stock library will cost \$0.99 per image if you want to use it in a commercial project. Although Adobe's app recommendations have been solid in the past, that was not the case for its stock collection - that's all changed. Here's the thing: I used to feel that Adobe didn't really know their product. That included Adobe's commercial stock libraries. I started using them, and was always a bit surprised by the photos. Lately, Adobe has improved that. Although I still worry about quality a bit - especially since I've generally found that stock collections by Apple and Google, for example, are better in quality than the Adobe ones, that isn't the case with the stock apps that came with the iPad Pro in 2017. With that said, I have no doubt that what I'm seeing here is real life. I can also say that I have had no such problems in the past when using my iPad Pro in meetings.
