The STACK feature within Photoshop for Smart Objects was introduced in the 2020 update, allowing you to create a stacked version of a single artwork with smart object layers automatically. While this wasn't directly introduced in Elements, you can now Free Transform the top layer directly, while the bottom layers stay stacked in their original position. To access STACK, there are a number of ways - including free training on Envato Tuts+. You can also take advantage of all the features in the new Photoshop Tags and Media Manager. One of the biggest updates in 2020 was the introduction of the Content-Aware Move alongside other content-aware tools that allowed you to fix the most common and common problems that users face when moving between different images. Adobe have committed to continuing to keep the existing functionality of the previous versions of Elements, and have redesigned the whole interface. The new User Interface of Elements makes it feel like a single

app, when it is actually a suite of different applications. There's a new style and new graphics, and no version lock any longer. The new version allows you to edit any layer's content. When you change a layer's content, a corresponding marker pops up on all the layers in the image (including those that aren't the changed one), so you can monitor modified content. In addition, you can also control what portions of the layer are visible and modify the transparency of each layer. This year's updates to Photoshop Elements and Photoshop aim to make users' lives easier and more productive. While these updates have been released for a number of years, the new version allows you to edit any layer's content. When you change a layer's content, a corresponding marker pops up on all the layers in the image (including those that aren't the changed one), so you can monitor modified content. In addition, you can also control what portions of the layer are visible and modify the transparency of each layer.

"Share for Review" is a collaborative feature that gives people the freedom to work in the browser without the requirement of a PhD to understand all of Photoshop's behavior. It empowers everyone to work together on projects, and no longer have to edit and comment on photos in separate environments. This new development also truly shows how Adobe is evolving their technology to bring the power of the web to the desktop," says Daphne Groeneveld, vice president, Content Services, Adobe. Finally, the new features in Photoshop are designed to improve the collaborative nature of the creative process. "The new one-click Delete and Fill tool is a feature we've been hearing about from our customers," says Groeneveld. "The integration in Photoshop brings these new tools into the desktop environment seamlessly." Adobe's new selection tools leverage the power of Adobe Sensei's AI to autonomously identify objects in photos. The "Auto Mask," "Smart Stylize" and "Auto Clone" tools help to detect and create effective selections. Photoshop Elements 2023 adds a new "Remove Background from Selection" tool, to make finding and editing objects such as hair, eyes, or section of an image, easier than ever.
